Gemini Teacher Lab

Participant packet | Plan, practice, verify and share

Dr. Renah Wolzinger | Eduvators
Teacher learning series | October 16, 2026

Use this editable packet to record your decisions and evidence. The Activity Guide contains the detailed directions. Replace the writing lines with typed responses, or print this packet.

Name, course and learner group

_____

_____

The lesson I want to improve

_____

_____

_____

One measurable learning objective

_____

_____

_____

Before you begin

[ ] I am using an institution-approved account.

[ ] My practice materials contain no confidential student information.

[ ] I have rights to use and share the selected materials.

[ ] I know which output I want students to use.

Start here: the Gemini menus

Start by opening the left sidebar. If it is collapsed, use the menu button near the upper left. Check the account profile, then identify the navigation choices and your saved work. Your menu may differ by account, device and rollout.

New chat

Start a fresh conversation for a new question or lesson. Returning to an existing chat is better when you want to refine earlier work. A new chat does not necessarily turn off account memory, personalization or active skills.

Teacher example: Begin a draft for your next lesson.

Library

Return to generated content, including images you have created. Open an item to review it and use the available actions. Check which content types your account displays; this is separate from Google Drive.

Teacher example: Find an earlier illustration before creating another.

Images

Open the image creation area. Start with a prompt or an offered template, then refine the result. Check factual details and add meaningful alternative text when using an image in a lesson.

Teacher example: Create an illustration of a learning concept.

Scheduled

View and manage prompts that run at a planned time. Review the schedule, instructions and status; use the available controls to edit, pause, resume or delete. Availability depends on the account.

Teacher example: Plan a weekly teaching-idea digest for your own review.

Students

Open the Students destination shown in your sidebar. Explore the student-focused options presented in your signed-in account. The public page does not reveal its current contents, so this guide does not assume a particular offer or feature.

Teacher example: Note which learning options you actually see before recommending them.

More

Expand additional navigation choices. If Customize is not immediately visible, look here; the Skills page is reached through Customize. More in the sidebar is different from a three-dot menu attached to one item.

Teacher example: Find additional tools without leaving your current workflow.

Find your notebooks and saved chats

New notebook

Create a separate workspace for a topic or project and add its sources. Use this when you want to organize materials around a unit.

Try it: Create a notebook for a lesson you teach.

Named notebooks

Titles such as “Microphones for Professional Projects” are saved notebook shortcuts, not universal menu commands. Open one to continue working with its materials. Your list will differ from another teacher’s.

Try it: Return to a project instead of starting over.

Untitled notebook

A notebook entry without a descriptive title. Open it, inspect its purpose and give it a useful name with the title or rename control available in your interface.

Try it: Use “Course | Unit | Topic” so you can find it later.

All notebooks

Open the notebook collection to locate a workspace beyond the shortcuts visible in the sidebar. Check that you are in the correct Google account if a notebook is missing.

Try it: Find the unit you prepared earlier.

Creating a New Skill

In the supplied menu, this is a conversation title: its link uses /app/ followed by a conversation identifier. It reopens that discussion. It is not the command for creating a skill.

Try it: For a new skill, use Customize, then Skills, then Create.

New chat starts a conversation. New notebook starts a source-organized workspace. Named notebook entries reopen your work. A conversation title reopens a chat. A menu label tells you where to go; a saved title tells you what you were working on.

Your supplied list also includes a notebook whose title begins “Copy of FDA Approves…”. This is another saved notebook title. A title alone does not verify the claims inside the notebook.

Menu exploration: my first steps

Complete this orientation before Activity 1. Use your own account; menus may vary.

1. Open the sidebar and locate New chat, Library and Images. Say what you would use each one for.

2. Open More and look for Customize and Skills. Return without changing a setting.

3. Locate New notebook and All notebooks. Identify one saved notebook title. Do not open or share another person's private materials.

4. Inspect Scheduled if available. Identify where you would pause an unwanted schedule; you do not need to create one.

5. Open Students if present. Record what your account actually offers. Do not assume another account has the same options.

6. Explain why "Creating a New Skill" in a recent-chat list is different from the Skills management page.

Three menu choices I can now explain

_____

_____

What I found under Students and More

_____

_____

A saved notebook or chat I can locate

_____

_____

One menu choice I still want help with

_____

_____

1. Gemini draft and revision

Complete Activity 2 in the guide. A helpful prompt names the audience, objective, task, format and boundaries.

My prompt

_____

_____

_____

_____

_____

_____

What worked in the first response?

_____

_____

_____

My follow-up request and why I changed the draft

_____

_____

_____

_____

One claim or direction I checked myself

_____

_____

_____

2. Source inventory and input check

Complete Activity 3. Record two or three sources before asking Notebook to create materials.

Source 1

Title / filename: _____

Owner or author / date: _____

Input method / permission to use: _____

What imported correctly? What was missing? _____

Source 2

Title / filename: _____

Owner or author / date: _____

Input method / permission to use: _____

What imported correctly? What was missing? _____

Source 3

Title / filename: _____

Owner or author / date: _____

Input method / permission to use: _____

What imported correctly? What was missing? _____

My source-selection comparison: A only versus A and B

_____

_____

_____

_____

3. Chat and citation audit

Complete Activity 4. Open the cited passage and compare it with the exact claim. A citation is a starting point for checking, not proof by itself.

My focused notebook question

_____

_____

_____

Claim check 1

Claim: _____

Source and passage: _____

Supported, partly supported or unsupported? Why? _____

Correction or limitation: _____

Claim check 2

Claim: _____

Source and passage: _____

Supported, partly supported or unsupported? Why? _____

Correction or limitation: _____

A question my sources cannot answer

_____

_____

_____

Saved note title: _____

4. Studio asset planning

Complete Activity 5. Produce one text resource and one additional format. Write the purpose before choosing the format.

Asset 1

Format / teaching purpose: _____

Selected sources: _____

Customization prompt: _____

_____

Error or improvement found in review: _____

Accessible companion or correction: _____

Asset 2

Format / teaching purpose: _____

Selected sources: _____

Customization prompt: _____

_____

Error or improvement found in review: _____

Accessible companion or correction: _____

Why these formats support my learning objective

_____

_____

_____

5. Connector decision record

Complete Activity 6. If connectors are unavailable, record the approved upload or paste workflow you used instead.

The task and connected service, if available

_____

_____

_____

Information the task needs and permissions I reviewed

_____

_____

_____

What the connection could change or send

_____

_____

_____

How I verified the retrieved information

_____

_____

_____

How I would disable it, or my fallback workflow

_____

_____

_____

6. My reusable teaching skill

Complete Activity 7. Begin with the sample instructions in the guide, then adapt them for your teaching. A saved instruction document is an acceptable fallback.

Skill name and when it should be used

_____

_____

My instructions, output structure and boundaries

_____

_____

_____

_____

_____

_____

Test 1: topic, result and needed change

_____

_____

_____

Test 2: different topic and result

_____

_____

_____

Saved or updated on: _____ Location: _____

7. Sharing and recipient test

Complete Activity 8. Choose the smallest appropriate sharing scope. Sharing a notebook can expose its sources; sharing an exported resource has separate permissions.

Resource title and final version date

_____

_____

Audience and sharing route: file, private notebook or public chat

_____

_____

_____

Exact permission chosen and reason

_____

_____

_____

Final link or approved file location

_____

_____

_____

Recipient test: account, result and correction

_____

_____

_____

[ ] Teacher-only answers and private material are excluded.
[ ] Captions, transcript or equivalent text are included where needed.
[ ] Attribution and AI disclosure are appropriate.

8. Classroom readiness and next step

Complete Activity 9. Mark each item only after inspecting your actual final resource.

[ ] The learning objective is measurable.

[ ] Student directions and the worked example are clear.

[ ] Important facts and citations have been checked.

[ ] Unsupported statements have been corrected or removed.

[ ] The reading level and examples fit my learners.

[ ] Headings, links, image descriptions and contrast are usable.

[ ] Media has captions, a transcript or equivalent text as appropriate.

[ ] Interactive content can be operated with a keyboard.

[ ] The answer guide is separate where needed.

[ ] Permissions were tested with the intended recipient account.

[ ] My AI disclosure reflects the work I actually reviewed.

The class and date where I will try this

_____

_____

What student learning evidence I will look for

_____

_____

_____

One improvement I will make after the lesson

_____

_____
